Learn a practical technique using composite that offers many advantages over traditional composite or porcelain restorations. Patients—including those that need extensive changes for function and esthetics—love conservative treatment, whether for financial reasons or just because they don't want their teeth "drilled down." Requiring virtually no prep even for smile makeovers and full mouth rehabilitation cases, long-lasting results can be expected. This course is very different than other resin courses. It is NOT about how to layer the resins, tints and opaques but covers additional information that will help any doctor master their Composite Bonding skills.

Learning objectives:

- Why porcelain is not always the best option
- Step-by-step technique for "little or no prep" composite restorations
- Restoring anterior guidance—even in severe wear cases—so it lasts for years
- A method of opening Vertical Dimension that is conservative, practical, and effective
- Verbal skills that will gain patient interest and increase patient acceptance

How to avoid the most common mistake with composite bonding

Comments from previous attendees:

- Great no-nonsense approach to techniques
- Very impressed with your delivery of information, thoroughness and organization of your subject!
- Real cases and results, with time-tested evidence
- For patients that cannot proceed to more expensive options, this is great!
