Esthetic dentistry is changing at a rapid pace. Being successful and efficient is about staying on top of the newest trends and clinical tips. In this program Dr. Brady will present the top clinical tips and techniques she is teaching in the area of esthetics. Some are old tried and true approaches that remain successful, while others introduce brand new materials and approaches. Learning Objectives:Anterior Composite Layering, Anterior Implant Esthetics, Tissue Management & Impressions, Provisionalization

Avoiding Restorative Failure- One of the things we dread in dentistry is case failure, and we loose sleep and stomach lining worrying about it. Cases fail for a multitude of reasons; some minor while others can be major disasters. The underlying cause can be esthetic, functional, biologic or sometimes behavioral. A large majority of failures can be predicted before a case begins, but we don't look for the warning signs. This program will look at risk assessment in all four areas, and present a systematic approach for examination, diagnosis and treatment planning designed to minimize surprises and maximize case success. Learning Objectives: Esthetic Evaluation & Risk Management, Understanding & Managing Functional Risk, Managing Caries Risk, Creating Patient Ownership
